

AI Governance & Data Quality Lead

– bridging data, technology and business across NDI Group

Would you like to play a key role in ensuring that NDI Group works from a single source of truth for data - and are you passionate about making sure our use of AI creates real business value across countries, functions and systems?

We are looking for an AI Governance & Data Quality Lead who will be based within IT while working closely with the entire business. The role is central to NDI's continued digital development and requires structure, strong collaboration skills and business acumen.

About the role

As AI Governance & Data Quality Lead, you will be the focal point for coordination, governance and progress within master data and the use of AI across NDI Group. You will have broad cross-functional responsibility and natural visibility throughout the organisation, while playing a central role in building the foundation for AI within the organisation.

Your focus will be to ensure:

- Clear ownership of and accountability for master data
- Consistent, high-quality data across systems and countries
- Responsible, value-creating use of AI solutions built on a solid data foundation

The role is closely connected to IT, to the business and to senior management, and requires you to move confidently between strategy and practice. You will report to the Head of Digital & IT and become part of the IT department.

Your key responsibilities

- Coordinate and support master data governance across NDI Group
- Work closely with relevant key stakeholders and business areas on the structure, quality and maintenance of master data
- Ensure robust and effective governance for the use of AI within NDI Group
- Help ensure that AI solutions are built on accurate, consistent and documented data
- Coordinate AI-related initiatives across the organisation in collaboration with IT and the business
- Support common methods, principles and guidelines - without creating a burdensome layer of control
- Communicate complex data and AI topics in language that both the business and IT can understand

Your profile

We imagine that you:

- Have experience with master data, data governance, BI, ERP systems (such as D365FO) or related areas
- Have an interest in - or experience with - the application of AI in a business context
- Thrive in a coordinating and communicative role involving many stakeholders
- Work in a structured manner and are able to create clarity and drive progress
- Have strong communication skills and can bridge the gap between IT and the business
- Understand that master data and AI are not solely IT matters, but also management and business disciplines
- Experience with a range of AI tools would be a clear advantage

What we offer

- A central and visible role in a group with ambitious digital goals
- The opportunity to shape how NDI works with data and AI going forward
- Close collaboration with IT, the business and senior management

- An organisation where ideas can quickly be turned into action
- An informal working environment with a high level of professional expertise and strong engagement

Why you should choose NDI Group

You will become part of an ambitious IT team focused on development, digitalisation and continuous improvement. At NDI Group, you will have the opportunity to influence both processes and decisions while building a strong network across the Group.

We believe that the best solutions are created in close collaboration with the business.

We are therefore looking for a colleague who is eager to engage, challenge the status quo and make a real difference.

NDI Group consists of, among others, the companies NDI A/S, Super Dæk Service, TyreTrust, Flex1One and J.A.K., and we employ more than 1,100 people across the Nordic countries and Germany.
